

User creates a new note using SPA

BROWSER

SERVER

Browser has registered a submit handler for when the form is submitted, which creates an object from new note and adds that object into memory. Then it redraws the note before finally sending notes to the server using AJAX request

HTTP POST

`https://fullstack-exampleapp.herokuapp.com/new_note_spa`

Request body: { content: "my new note", date: "2020-06-22"}
